The New Model No. 24

A Condensed Detailed Description

Model No. 24

Price, Complete \$100.00

Protected by twelve patents in the United States and Foreign Countries—others pending.

New Model No 24 Fox Visible Typewriter, while in no wise a radical departure from our former models, has a very large number of new features and mechanical refinements which destine it to become **even more popular** than our regular Fox models have been in the past. Briefly described, our new perfected Fox Visible Typewriter, model No. 24, is a Visible Writer having a carriage to accommodate paper 10½ inches wide—Double Forward Carriage Release—New Patented removable Ribbon Spools

automatically reversing and oscillating the ribbon—Forty-four keys writing eighty-eight characters—Tabulator—Back Space Key—Two Color Ribbon—Stencil Cutting Device—Card Holder—Interchangeable Carriages and Platens—Indestructible Key Buttons—Light Touch—Easy Action—Noiseless—Durable.

Type Bar and Hanger

The durability and permanence of alignment of a typewriter are almost entirely determined by the construction of the **type bar and hanger**, as it is at this point on any typewriter that nine-tenths of the wear on the machine occurs.

The type bar and hanger on the new model No. 24 has a pivot bearing made from a high quality of drill rod, hardened. We have at great expense put in special machinery for grinding the type bar pivots, using diamond dust for the grinding and polishing, making the cone on the pivot as perfect as it can mechanically be made. This not only makes the type bar move easily but insures most **perfect alignment and great durability** and is the same treatment as is given to the bearings in a watch. By means of this conical pivot, the wear, as it may occur after years of service, may be taken up by turning the screw on the top of the hanger. This wear is taken up alike on both sides of the bar, so that the type will be held in its original position **and the alignment maintained.**

The hanger itself is made of soft steel encircling the hardened pivot, thus making an anti-friction bearing.

ST (No P.O.)

This ability to take up the wear as it may occur on the bearing of the type bar is a very important feature, used only by our Company and is strongly protected by patents.

Touch

There is no one feature of a typewriter about which more absurd claims are made by manufacturers, and salesmen, than in regard to the touch and action. Regardless of any advertised statements, the Fox Typewriter has to-day, and always has had, **the lightest touch and easiest action of any typewriter ever manufactured.** We will prove this claim, as well as every other, by delivering the Fox Typewriter for free trial for comparison with any other typewriter.

Finger Levers

The finger levers on the new model No. 24 Fox Visible Typewriter are of hard steel, very light at the forward end, giving the Fox an even lighter touch than our former models.

Escapement

The new Fox Double Bevel Escapement is simple, strong, free from frail parts, and without any special adjustment it will give all the speed required by the swiftest operator, or it may be used by a slow beginner with no danger of blurring.

Tabulator

Every Fox Visible Typewriter has a perfect column stop tabulator for all kinds of

typewritten work—paragraphing, billing, filling in forms, etc.

Back Spacer

The Fox Back Spacer returns the carriage step by step and makes it possible to insert an omitted letter or separate two words written without spacing between.

Ribbon Movement

The ribbon movement is one of the wonderful things of this perfect typewriter, either the single color or the two color ribbon can be used. The action of the ribbon is **entirely automatic**, the reverse movements being absolutely positive and accurate and requiring no attention from the operator. When the single color ribbon is used, the ribbon oscillates, which means that its entire surface is used. This effects a great saving in the price of typewriter ribbons over the ribbon movement that only feeds straight across from spool to spool—our oscillator practically doubling the life of a ribbon.

Ribbon Spools

The model No. 24 is supplied with patented cone shaped interchangeable ribbon spools. These spools have a hinged cover for the reverse opening making the reverse positive and automatic. All Fox Brand Ribbons are sent out, without extra charge, on these new ribbon spools.

Paper Feed

The paper feed will handle cards or paper of any size from a postage stamp to the full capacity of the carriage.

Card Writing

The indicator shows the exact location of the line of writing as well as where the next letter will print; it is also a perfect card holder. There are no separate parts to be lost, and adjusting to be done.

Stencil Cutting

Touching a key on front of the machine prevents the ribbon from coming to the writing position when used for writing wax stencils for duplicating. The strong type bar with its perfect bearing, as well as the way in which the type are made, and their powerful blow, makes the Fox the best of all typewriters for stencil work.

Manifolding

The same reasons that make the Fox the best machine for stencil writing make it a perfect machine for manifolding, giving the maximum number of copies without increasing the work of the operator.

Carriage

The carriage on the new model No. 24 is 12 inches long, taking paper 10½ inches wide, and writing a line 9 inches in length.

Interchangeable Carriages

Any one of four different lengths of carriages can be used on the Fox Visible Typewriter and an operator can change carriages in a few moments. These carriages vary in length from 12 to 20½ inches. A 12 inch carriage is supplied regularly with the model No. 24, but extra carriages of

either size can be purchased with the typewriter or added to it at any time. This is an important feature, for the work required of a typewriter may change, making it necessary to have a wider carriage at some later date.

Carriage Release

The new model No. 24 is provided with a release lever at both ends of the carriage, making it possible to release the escapement and move the carriage with either hand.

Finger Button

The finger buttons used on our new model No. 24 are entirely new in typewriter building and patents on these are pending. The body is of light metal riveted to the finger lever. The cap, or finger button, is composed of two discs of celluloid cemented together under heavy hydraulic pressure, and then formed into a cap made cup shape to fit on the finger. The letter is printed white, **on a black background**, and being **between two discs** makes a celluloid character which is indestructible.

Covers

A fine rubber cover is included free of charge with each Fox Typewriter of any model. We are prepared to furnish a metal cover with polished oak base for \$2.50 additional.

Keyboards

The keyboard shown on following page is furnished regularly with the model No. 24.
