

One
Thing at
a Time

The escapement

or letter spacing mechanism is the most vital feature in typewriter construction. It is to the typewriter what the driving mechanism is to the locomotive. Without it the machine has no power to move. The speed of the machine, its ease of action, the permanent excellence of its work, all depend on the quality of the escapement. The typewriter which has the best escapement is bound to be the best typewriter.

THE new Single Dog Escapement of the REMINGTON TYPEWRITER is *the greatest single advance which has ever been made in the mechanics of the writing machine.* The Remington escapement has always been the best—that is one great reason why the Remington Typewriter has always been the best—but the new

single Dog Escapement creates a new standard even for the Remington.

HERE ARE SOME OF ITS ADVANTAGES:

No change of parts is necessary to adjust the new escapement to the needs of the most expert or the most erratic operator.

Any one can make such adjustments who is familiar with the ordinary operation of the machine.

The speed of the new escapement is beyond the capacity of human fingers. It operates with a spring and a jump which is a surprise and a pleasure to every operator.

It cannot vary because there is nothing to
“slip” and nothing to get out of order.

And remember

that the new escapement furnishes
only one of the many reasons for
the enduring supremacy of the
Remington Typewriter.
